Plantskydd Animal Repellent – Spring Tips

Plantskydd Ready to Use Spray and Soluble Powder Concentrate

- Water plants well at the roots before treatment.
- Make sure plant foliage is completely dry before spraying.
- Apply when temperatures are above freezing.
- Allow product to dry for 24 hours for long-term protection.
- Spray flower buds while they are closed.
- Use spray on the animals most delectable plants in your yard: tulips, hostas, lilies.
- For shrubs such as viburnum, yews, arborvitae etc., treat new growth as summer progresses.
- Spray all perennials that may be at risk once they have leafed out.
- If you're planting young fruit tree whips, dip them in Plantskydd solution before planting, then spray trees when the leaves have formed.
- For fruit trees and conifers, treat prior to, or 2-3 weeks after, bud-flush.
- Use a stick or broom handle to lift aside broadleaf to spray the underside.
- Watch browse patterns, animals may switch to plants they have not eaten before when you have sprayed their favorites.

Plantskydd Granular – Rabitt & Small Critter Repellent (also effective against deer)

- Granular will work against deer for low-lying flower and vegetable beds.
- Apply a 16" strip thickly around the entire bed and then broadcast it within the bed like chicken feed.
- Sprinkle directly into your hanging pots or containers to keep out those pesky squirrels.
- Sprinkle in and on top of soil where you are planting bulbs to discourage squirrels and others from digging them up.
- When your new perennials shoots are peaking through, sprinkle granular.
- Sprinkle granular anywhere that you see Vole activity.
- Watch your calendar – and reapply granular as needed every 6-8 weeks.

Remember: For very heavily browsed 'choice' areas, combine both Plantskydd Granular and Plantskydd Liquid Spray for maximum protection.

100% Organic – OMRI listed – non-toxic

Not harmful to animals or the environment

Approved for Organic Gardening

Longest lasting, year round protection for your garden & landscape.

Does not require re-application after watering or rainfall.
